ABOUT FDP

Digital image processing is the use of computer algorithms to get an enhanced image or to extract some useful information from it. Nowadays, image processing is one of the rapidly growing technologies. It forms a core research area within the engineering and computer science disciplines too. Machine learning is also a sub-field of computer science that evolved from the study of pattern recognition and computational learning theory in artificial intelligence. It explores the study and construction of algorithms that can learn from and make predictions on data. This faculty development programme (FDP) is devoted to recent developments and research outcomes addressing related theoretical and practical aspects of Machine learning and Image processing techniques. In this FDP, most effective machine learning techniques will be discussed. The participants will gain the 'know-how' needed to apply these well-known techniques to new problems. Various sessions will provide a broad introduction to machine learning and image processing. Application of various learning algorithms will be discussed through case studies and problem solving method.

The programme will be conducted by faculty members from IITs/NITs. Speakers from industry are also expected to deliver a part of the course.

PEDAGOGICAL TOOLS AND METHODOLOGY

Inputs will be imparted through:

1. Lecture-cum discussion, case studies and simulation exercises.
2. Interaction with experts in machine learning and image processing.
3. Group work and practice sessions.
