## 8. Suggestions if any

1. The syllabus should bring far more hands-on (practical) aspects from 2nd year onwards, including latest tools, techniques and practices from the Industry. Adjunct Faculty from industry, Alumni and volunteers can be leveraged for this purpose as well.

2. There should more be mechanisms for students to engage with industry experts (through research projects, internshipps, etc). This is happenning on individual initiative, but we need an institutional mechanism to foster this.

3. It is usually observed that BE projects only see about 6 months investment from students, and many projects are chosen at the last possible moment. This does not fpster specialization or depth. Can we consider engaging students in domain/projects of their choice from 3rd year onwards, sos that a student can invest 2 ful semesters in a domain/family of projects, before committing to a specific project in BE. This will allow students to engage in deeper research, evaluation, and specialization, and may even help increase product development and patent registrations.

Thanks.
